ENEXME REGULATION: AUTOPHOSPHORYLATION ACTIVATES THE KINASE
ACTIVITY:

SUBUNIT: TETRAMER OF 2 ALPHA AND 2 BETA CHAINS LINKED BY DISULFIDE
BONDS. THE ALPHA CHAINS CONTRIBUTE TO THE FORMATION OF THE LIGAND-
BINDING DOMAIN, WHILE THE BETA CHAIN CARRY THE KINASE DOMAIN.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

SIMILARITY: BELONGS TO THE INSULIN RECEPTOR FAMILY OF TYROSINE-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SIMILARITY: CONTAINS 2 FIBRONECTIN TYPE III-LIKE DOMAINS

Y
TISSUE SPECIFICITY: IN THE EMBRYO, EXPRESSED AT HIGH LEVELS IN THE
DEVELOPING BRAIN AND NEURAL TUBE. IN ADULT, HIGHLY EXPRESSED IN
BRAIN WITH VERY LOW LEVELS FOUND IN TESTIS, HEART AND THYMUS.
BRAIN WITH VERY LOW LEVELS IN EARLY GESTATION. HIGHEST LEVELS
BEVELOPMENTAL STAGE: LOW LEVELS IN EARLY GESTATION. HIGHEST LEVELS
EXPRESSED DURING MID GESTATION. LEVELS DECREASE IN LATE GESTATION
EXPRESSED DURING MID GESTATION. LEVELS DECREASE IN LATE GESTATION
AND REMAIN AT THIS LEVEL IN THE ADULT.
SIMILARITY: CONTAINS 6 FIBRONECTIN TYPE III-LIKE DOMAINS.
SIMILARITY: CONTAINS 6 FIBRONECTIN TYPE III-LIKE DOMAINS.

New water-soluble polypeptide(s) with affinity for IFN-alpha and beta - used to treat e.g. lupus erythematosus, Behcet's disease, aplastic anaemia, diabetes mellitus, rheumatoid arthritis, etc. claim 2; Page 45; 52pp; French.
The transmembrane and cytoplasmic domains of the native IFN receptor have been deleted to obtain a soluble, circulating form of the receptor. Potentially immunogenic epitopes have thus been eliminated. Derivatives obtained by substitution or deletion of this sequence are also claimed as are hybrid molecules comprising the soluble receptor (or deriv.) and an immunoglobulin such as IgG1.

Sequence 436 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Soluble interferon-alpha/beta receptor

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             water soluble polypeptide(s) strongly bind interferon(s) alpha and beta - useful as immunosuppressants, for treating auto:immune of diseases and transplant rejection claim 2; Fig 1; 58pp; English.

DNA encoding the water-soluble polypeptide with a high affinity for IFN-alpha and -beta is isolated by PCR, using appropriate oligonucleotides as primers and cloned cDNA as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (30533), was incubated with oligos (30534 and 30535. R28496 represents the complete receptor. R28495 clacks the transmembrane and cytoplasmic domains. Both forms bind if IFN in the same way as antibodies so are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the toxic side-effects of known immunosuppressants such as steroids.

                                                                                                                                                                                                                                                                                                      New human alpha-interferon receptor protein - useful for testing interferon agonists and in treatment or diagnosis
Disclosure; fig 4; 30pp; French.
This recombinant human alpha interferon (IFN) receptor protein is useful for the testing of IFN agonists and for treatment and diagnosis of viral diseases and tumours. Antibodies raised against this protein can be used for blocking the receptor when required, eg where overexpression of alpha-IFN is harmful. The Abs are also useful for eg drug targetting. Variants of the protein, having residues 164 (Thr) replaced by Arg and an Asp inserted between residues 479 and 480, are also useful.

                                New water-soluble polypeptide(s) with affinity for IFN-alpha and beta - used to treat e.g. lupus erythematosus, Behcet's disease, aplastic anaemia, diabetes mellitus, rheumatoid arthritis, etc. Disclosure; Page 47; 52pp; French.

The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the native receptor or by substitution. Potentially immunogenic epitopes are eliminated and the deriv. can be secreted from transformed cells. Soluble deriv.s block the activity of IFN alpha/beta and can be used to treat autoimmune diseases or to inhibit graft rejection. See also Q14239.

The soluble polypeptide(s) strongly bind interferon(s) alpha water soluble polypeptide(s) strongly bind interferon(s) alpha primater soluble polypeptide with a high affinity for diseases and transplant rejection claim 3; Fig 2; 58pp; English.

DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the water-soluble polypeptide with a high affinity for Claim 3; Fig 2; 58pp; English.

DNA encoding the water-soluble polypeptide with a high affinity for DNA encoding the tis isolated by PCR, using appropriate coligonuclectides as primers and cloned cDNA as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (Q30539), was incubated with oligos colors the transmembrane and cytoplasmic domains. Both forms bind complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind complete receptor with oligonal content of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of the property of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1077
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1277
